Take control of your images with this creative workflow suite and explore your creative vision on the go. Bring your work from wherever – and however you like to work – into the cloud with Lightroom 5, edit on your iPad, then share to the cloud or as a web link. Along with the other bundles, you also get a tablet-optimized app, and a collection of productivity and design tools with the Creative Cloud. And if you jump into the new Creative Cloud, you get access to a range of new features and the latest updates. Most of this is available for just $9.99 (used version included.) You also get key new features like Creative EMS Mix, which enables you to create, edit, and play back audio and video on your iPad as you preview (mix) your images in Photoshop. This creates the perception of a bigger canvas in the studio. While the ability to edit video and audio is obviously a big addition, the way that it's put together is questionable. So far the features are a mixed bag, both in terms of what they offer and how they're delivered. In the Creative Cloud, they've made a point to tout the productivity features. These include new tools like reverse search and auto reveal. At first blush, these seem quite useful. The reverse search is a convenient way to search for a specific image in all of the previous versions of your files. The auto reveal is all about making it easier to find, say, the image you were working on last. The selection feature seems great on paper and on the iPad, too. Unfortunately, it's a real pain to use in practice.

Photoshop Replace Color (beta) is a powerful new algorithm for the automatic replacement of colors to more accurately depict realistic colorspaces in various image rendering processes. This is achieved through a lot of math, but ends up allowing the user to pick a color from an image and manually tweak that color throughout the image. If you feel a color needs to be tweaked, it's important not to apply a process that may change this color – you're better off to use a brush or adjustment layer to manually adjust the color. Adobe Software Engineering Services (beta) are the operational processes and processes for all Adobe products. The new beta version more closely aligns these processes with Black Magic Design, Adobe's internal engineering organization. For customers, they help deliver highly efficient systems that run and scale well. Adobe is now tightly integrated with the open source community with the acquisition of Industrial Light and Magic (ILM)

and Pixologic, the developer of ZBrush. They announced that Adobe continues to invest in modernizing its rendering stack to co-opt the production-grade rendering power of the GPU, resulting in GPU-accelerated 3D for users of the CINEMA 4D visual effects and compositing applications on the latest Mac OS and Windows operating systems. 3D artwork can now be seamlessly shared between these applications and Photoshop. This is a huge benefit for creatives who want to accomplish complex workflows leveraging not only Photoshop but also ILM's ZBrush and Pixologic's Substance. This new integration unleashes great design workflows, increasing productivity across an entire creative team. The power of 3D created by the professional community today is an ideal starting point and a jumping-off point for the next generation of professionals working extensively across 2D and 3D.

Automatic Artboards: Photoshop brings artboards to the desktop. Artboards are a powerful feature of Adobe Illustrator and Adobe InDesign. They are basically templates that make it easy to create a project with a single set of predesigned pages. By creating artboards in Photoshop, you'll see them in the toolbar immediately. Viewing them as a group, it's now possible to swap between them and more quickly kick off a design project. Artboards allow you to sketch big ideas in just seconds and makes collaboration in Photoshop much faster. If you are using artboards, these new capabilities make it easier than ever before to get started, stay organized, and have new ideas pop into your artboards to be used as you work. Behance Support: Click anywhere on the canvas to add a 'link' to Behance, where you can share sites and content from some of your favorite creative communities, like DesignLovely. Here you can share IPTC data and sort your projects by team, category or date. Now you can go to any image or site in Photoshop and easily share your work. With Behance support, the minute you click anywhere on a photo, will appear in your Behance feed. You can quickly and easily share your projects with Behance while you work. And it's seamless with Layer-based design. This will add a Behance link on the bottom of your Artboard tools, making it easy to add Behance tags to a single artboard. Timeline: Photoshop's powerful action layer system allows users to easily duplicate and undo minor changes in any layer without losing history. Actions can now be placed in 'Timeline,' making it easy to customize the steps required to create a design. New features for timeline make it easier than ever to switch between these actions in the timeline without losing the state of the layer. With timeline support, you can see each layer of action, and easily add or remove actions in layers. This gives you the flexibility to create the most effective workflow for your projects.
